Remembrance Day Well Observed By Local Legion

Gordon Memorial Church Filled For The Occasion

The local Canadian Legion had most successfully made arrangements for the Armistice Day Service which was held in Gordon Memorial Church Thursday morning.

A large crowd assembled at the Legion headquarters and marched to the church led by the Pipe Band under the command of A. Hoesle.

The local unit in charge of Captain McQueen and Major Osgood was out in full force and joined in the procession.

Rev. H. V. Ellison was in charge of the service and Rev. P. S. Hannett was unable to be present as he had to take charge of the service in Medicine Hat. Mr. Ellison gave a very impressive and appropriate address for the occasion.

During the service Comdr. Allison recited an appropriate verse while President W. Ellis laid a wreath in honor of the dead. Similar wreaths were placed in the other churches.

The Last Post was sounded by Mr. B. Collins and Piper A. Hoesle played the Lament.

After the service the procession returned to the Legion headquarters and dispersed and the pipes gave an appropriate musical program.

The remembrance of the occasion was one of the most impressive and was largely attended by the citizens.

Four Parties Selected Lethbridge Candidate

Dr. Campbell Selected For By-Election Dec. 2nd

At a joint political convention held in Lethbridge last Friday, Dr. P. M. Campbell was nominated as candidate for the provincial by-election to be held in that constituency on Dec. 2nd.

The joint convention was made up of Liberals, Conservatives, U. F. A. and People's League.

Social Creditors have selected Dr. Campbell as their candidate. The Labor party has also nominated a candidate.

Vancouver police are advising farmers who ship turkeys to B.C. to ascertain bona fides of shippers before shipping poultry to the coast.

Young People's Rally At Fifth Ave. Church

Redcliff Young People Were Elected as Officers

The Young People representing the Medicine Hat Presbytery, held their Annual Rally in Fifth Ave. Church on Friday last.

One hundred and fifty young people from Medicine Hat and district, sat down to a banquet after which business was attended to, and speeches given by various representatives. Rev. H. V. Ellison of Redcliff, chairman of the Presbytery brought greetings from that body. A number of the Anglican clergy, also spoke words of kindly greeting from the Anglican Young People. The minister from Gordon Memorial Church, Redcliff, was elected Literary President, and Alice Burroughs, secretary. Jim Brown, Director of Camps, and Training.

Local Church Members At Good Will Service

All Churches Join In With This Gathering

A number of Redcliff people including several young people attended the good will service, and Young People's meeting in Fifth Ave. Church on Sunday night. All the main denominations withdrew their services, and united together for this service. The church was crowded. Rev. J. R. Allen of Great Falls preached, and gave a challenging address to the Young People, at the later meeting, Helmer Kaldstad of Redcliff conveyed greetings of the United Church Young People to the Young People at Great Falls, and all the Young People's organizations of the various churches represented did likewise.

Commencing last week-end a heavy snow started falling and continued for several days. Over ten inches covered the ground. As there was no wind to snow was equally distributed over the whole district and left the streets and main highways deeply covered. As the cold weather has frozen up alleys and dams the fall of snow has supplied water for the stock.

M. Wargner was held up at Valley last Sunday and handed out all his money which amounted to \$2.00.

School Literary News

The meeting was held in the Literary room.

The Redcliff Literary Gleasons was read by the Editor-in-Chief. An open forum discussion on the subject "Should Japan be condemned for invading China" was then held by the Grade Nine Social Studies Class. Loren Cooke acted as chairman. The speakers for the affirmative side of the question were Flor, Stratton as leader and Evelyn Fulton, Jack Lein, Kenneth MacKnight, Sigrid Horled, Kate Lann as supporters. For the supporters of the negative side Winnie Banforth as leader had Mabel Humphrey, Evelyn Kaldestad, Gordon Osgood, Kathleen Sheasby, Helen O'Bar and Oliver Heated. Miss Broadfoot then gave a criticism of the whole meeting.

Robbery and Fire At Tilley Tuesday

Thought Blowing of the Safe Started The Fire

Several buildings in Tilley were destroyed by fire last Tuesday morning shortly after one of the stores had been robbed of \$300.00. The A. H. Lee store was robbed and it thought that the blowing of the safe started the fire. Lee's residence and "Shorty" Mathew's store and residence were also destroyed. Another building, owned by E. Karad was torn down in order to prevent the fire spreading further.

Were Afraid Aberhart Confiscate their Money

Two foreigners in the Tiber district, Paul Gregus and Joe Gregus, who were afraid that their bank deposits would be confiscated by the Aberhart government, took their money out of the bank and put it in the trunk in their home. Shortly after their \$900 was gone. Their former friend, Mr. Orloff, is charged with having stolen their money. The accused was found in Calgary and had about that amount of money on his person.

A Company of Canadians and Americans known as the North West Distillers Co. has purchased the old Brewery building in Medicine Hat and will have it in operation soon.

Social Credit Hired Expert Gets Six Months

Was Found Guilty of Charge of Defamatory Label

G. M. Powell, British Social Credit authority who was hired by the Aberhart cabinet to show them how to distribute \$20 a month to all Albertans over 21 years of age, was sentenced to six months in jail with hard labor, when on trial charged of publishing defamatory libel. It was found that he was not a Social Credit member, but a member of the Social Credit League. He was sentenced to three months last week-end.

Besides the sentence given to Mr. Powell was a recommendation for his dereliction after serving his sentence.

Declaring signs had not been hanging that there is growing trouble and disrespect for the law in Alberta, Mr. Justice Ives said. Mr. Powell was in part responsible.

Both Mr. Urwin and Mr. Powell have appealed their cases. In going over the evidence of both cases and remembering that Major Douglas kept several thousand miles away from Alberta, it leads one to believe that the father of S. C. made the correct choice, so that his will of the ship would fade away.

Date For Hearing of Alberta's Three Bills

Will Be Set This Week End For Supreme Court

Validity test of the "disallowance" and "reservation" clause of the British North America Act has been set for Jan. 10 and this week a date will be fixed for hearing reference to the supreme court of Canada on the three Alberta bills reserved for the pleasure of the governor general.

Legal agents for the interested parties will appear before Chief Justice Duff Friday next to fix a date for the hearing of reference on competence of the Alberta legislature to enact the three bills in question.

It has been expected by the supreme court and the justice department, that the first reference would have been held about Dec. 15 Alberta, however, not yet having engaged counsel desired the January date so ample time would be given for preparation.

Second Sunday Concert Was Well Attended

Program Was Put On By The School Pupils

Despite the heavy fall of snow which was still falling, a good crowd attended the concert in the Army building last Sunday evening.

These entertainments were arranged by Mr. B. Allison for the purpose of raising funds for the poor and unemployed.

The program last Sunday was put on by pupils of the School and was thoroughly enjoyed by all present. Mr. F. Baird acted as chairman.

The pupils taking part were Dorothy Lela with a tap dance and Betty Palmer with the Highland Fling. Piano selection by Doreen Cooke and Helen O'Bar. Solos by Laurie McGill, David, Jacquelin McCleary, Carl Johnson and little Ernie Martin. Agnes Rindahl and Vivian Marty gave a duette and all the School Children gave two fine choruses.

Doreen Cooke and Kathleen Sheasby acted as accompanists for the evening.

Mayor Sangster counted the collection and announced that \$9.23 had been donated.

During the evening Mr. Allison announced the concert for next Sunday evening which would be given by the Melody Mads of Medicine Hat.

Local S. A. R. Boys Had Social Evening

Was Held In The Armories on Friday Evening

Local S. A. R. members held a social evening in the Armories last Friday evening when their lady friends and guests from the Medicine Hat Militia attended.

There was a large attendance and dancing opened up the first part of the evening when all thoroughly enjoyed the music which was provided by the Stinson Orchestra.

During the evening refreshments were served in the commodious quarters upstairs, after which there was a pleasant pastime of Chorus singing and amusements. A solo was also rendered by Mr. J. Davies. Dancing was again resumed, in which Miss Terry Walker and Mr. Y. Lawson won the elimination dance and the spot waltz by Miss Nissen and Mr. J. Palmer.

The committee in charge of the evenings program was highly praised for the success of the event.

Chamber of Commerce in Town Organized

Officers Elected at Meeting Held Last Friday Evening

At a meeting of local citizens held in the I. O. O. F. hall last Friday evening it was unanimously decided to organize a Chamber of Commerce for the purpose of taking an interest in all matters for the welfare and improvement of the town and surrounding country.

Mr. D. Broadfoot, who was instrumental in starting the movement, outlined the object of the meeting, referring especially to the need of the development of irrigation in the surrounding districts for the farmers. He had investigated the possibilities of co-operation with all organizations surrounding and was of the opinion that thereby way to get results was for all to get together and bring their needs to the attention of both Dominion and provincial governments.

After his discussion it was decided to organize and the following officers were elected:

President — C. T. Hall, Vice Pres. — H. C. Dacre, Secretary — D. Broadfoot, Com. — Messrs J. N. Rose, and A. Maskell.

It was suggested by the meeting that elected officers proceed to take steps at once to investigate all matters which would possibly improve conditions throughout the district.

It was decided to call another meeting in the near future, which will be advertised and it is hoped that all interested will be present.

It is felt that all managers and employees of industries and business men and women in town as well as farmers of the district should take an interest in this organization.

James Shannon, 81-year-old resident of Medicine Hat, reported missing Saturday, was found dead Sunday morning at the foot of the river bank.

Ten year old lad, son of C. P. R. agent at Walsh was struck by a train. His left arm and fingers of right hand were amputated. He is reported as well as possible.

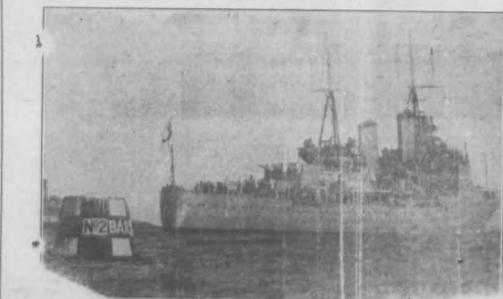

Premier Aberhart says he will 'name the Supreme Court or the Privy Council' Alberta credit isn't made available. Why not blame the four in power.

Messrs. J. H. Lewis and G. F. Powell were released on bail of \$20,000 each pending appeal against conviction, by Chief Justice Harvey.

Many young people in Redcliff who went to school about ten years ago will indeed be sorry to know that their one-time teacher, Miss Smith, has been seriously ill for several weeks past. They will be pleased, however, that she is now improving favorably.

Krikor Hekemian, a 25 year-old Armenian from Haatzen, broke the ice at Hendon when he near Lethbridge last Sunday and took a ten minute swim. He cut and scraped himself in several places on the sharp ice.

Freedom With Tolerance

Those much cherished and dearly bought attributes of democracy, freedom of thought and freedom of speech, will never be imperilled as long as they are accompanied by sincere and earnest efforts to practise the responsibilities and reasonable restraint which the enjoyment of these privileges entails.

The duty of preserving these rights which the people of this country enjoy in such large measure devolves not only upon the individual but upon all who have the direction of the channels employed to give expression to human thought and utterance—the pulpit, the press, the school, the theatre, radio, the meeting place and even the home.

As long as the means of expression have full cognizance of their responsibility for the maintenance of thought and free speech, and exercise that responsibility in a proper spirit of tolerance and restraint, the privileges of free thought and free speech will remain a right to be enjoyed. If not, the danger arises that these rights will become a privilege only and the privilege of the few.

Undoubtedly Sir Edward Beatty had something of the kind in mind recently when, addressing convocation at McGill University, he appealed for freedom of thought and freedom of speech, "but within the limits of accurate knowledge, sound logic, a sense of responsibility and the ordinary amenities of public life in a civilized community."

While Sir Edward's ideal in this was, applying the general principles he was enunciating, to the universities as leaders of thought in the communities they serve, the admonition he was conveying has a much broader application, for while these institutions have been, and are, under the influence of present and future trends of thought and utterance, so are these other agencies to which reference has already been made.

In fact, it might perhaps be urged, with little fear of contradiction, that some of them and particularly the radio and the press, exert a much greater influence on the caliber of citizenship of the present day and the future and, hence, the type of government that will guide the destinies of the country, than do the universities.

The reason for such a statement is not far to seek, for the newspapers and the radio are presenting viewpoints day in and day out the year round to a vast audience of all ages and classes. The direct contact of the universities is limited to youth for brief periods of three or four or five years, and within those periods for only a portion of the year, and their direct influence is limited to a class of youth whose parents can afford the fees of a college education or who are sufficiently ambitious to find the wherewithal for the expense from their own efforts.

Hence, if the responsibility imposed on the universities to safeguard democratic rights, including free thought and free speech is great, how much greater is the responsibility of the radio and the press.

To date little or no grounded complaint has been heard that radio has not lived up to its obligations in this respect and it is to be hoped and expected that the recently-organized Canadian Broadcasting Commission will keep this obligation in mind, that it will be a constant factor in broadcast in the form of speeches through the ether is highly desirable, so also is the use of restraint and the exercise of a spirit of tolerance, whether the topic be political, religious, social or economic.

The same obligation, including that of respect for the opinions of minorities, rests squarely on the shoulders of the press of the country, both daily and weekly, and as long as these organs of opinion fulfill this trust there is little likelihood of the people of this country expressing in attempts to muzzle the newspapers or dictate their policies.

It has often been said that a free press is the bulwark of democracy and so it is. It will continue to carry the proud post of defender of the democratic faith as long as it continues to exercise moderation, tolerance and respect for the rights of others.

Almost without exception, weekly newspapers of Western Canada have a fine record in this respect and that is the reason they exert a profound influence in the communities which they serve. There is no reason to suppose that they will not continue to carry the torch of the democratic faith and perpetuate the fine example they are giving to the press in countries which are not so fortunate as the Canadian west.

From time to time highly decorated tributes have been paid by those in authority and to the independent but tolerant spirit reflected in the columns of the weekly newspapers of the prairie provinces. In doing their duty in assisting to uphold the fundamentals of democracy the weekly newspapers have set a high standard and are doing much to diffuse and maintain a high standard of citizenship and to fortify their own position in the hearts and minds of the people.

Would Take Long Time

Tourists who are anxious to cover a lot of territory in a few days will be interested in knowing that a motorist driving 45 miles an hour steadily for 10 hours a day would require 15 years, 10 months and 21 days to travel over all the improved roads of the United States. So it can't be done on one vacation, after all.

The most difficult thing for a young mother to learn is that other people have perfect children, too.

The longest railway run in the world is from Riga to Vladivostok, a distance of 4,800 miles.

Puzzled Over Tree Curving

A giant hick tree in a grove at Ellery Court, N.Y., carries a secret that has puzzled passersby for more than a century. Cut deeply into its bark are a date and two sets of initials carved by holders of a "May 1790, A. K. R. S." Speculation on the origin of the carved initials has led to the possibilities of a lover's tryst and of French voyageurs' trail-blazing.

To mark the fourth centenary of the Reformation next year the Free Church Federation hopes to distribute a Bible to every home in Britain. Ten thousand Bibles will be needed.

New Material For Shoes

Australia Is Going To Use Skin of Reef Fish

A unique industry is now being started along the Great Barrier Reef, Queensland, Australia, the 200-mile long belt of this island continent against the waters of the Pacific Ocean. This is fishing for the reef fish. Abounding there, they will be sought solely for their hides, which will be used to help out the war-torn of women. Extensive research by the Australian government have proved that skins of reef fish can be made into a soft and extremely durable leather, and factories are being established to manufacture them into women's shoes.

The reef fish is the forest fighter of the Pacific. The shark is no match for it, and a diver would unhesitatingly choose to fight the shark instead of the reef fish if he were forced to do so.

It takes a killer whale's bulk to subdue the reef fish, known to science as *Halargadus mazarus*, inhabits the waters about the Great Barrier Reef and is found in tropical and subtropical latitudes. The largest eel yet caught measured almost thirteen feet long and resided in the Brisbane Museum. Fearless, alert, swift, remarkably "mechanical," it was a "sea serpent" of the natives may well have been the original of some of the legends. Its other attributes are the unending of its enemies, and it is amazingly equipped with teeth, which only the roof of its mouth as well as its jaws.

Still in Its Infancy

Television Pictures Seen in New York Were Blurred

Television pictures broadcast from the National Broadcasting Company's transmitter stop the Empire State Building were badly out of focus. The pictures were projected on a 2-by-4-foot screen to entertain members of the Society of Motion Picture Engineers assembled at Radio City.

For the first time in New York have movie stars been publicly demonstrated on the enlarged screen. They were made possible by a projection was developed by R. R. Law of the R. C. A. Manufacturing Company. Up to now the 7-by-10-inch radio image has been the general standard.

The large picture was viewed in dark rooms, images were fuzzy and its associated sound (indistinct) compared with a 7-by-10-inch talking picture, also demonstrated. Referring to the pictures engineers commented as they watched a planet perform on the large screen, that "the picture is still in its infancy." They saw the need for much simplification of the apparatus, which at the moment is a complex of too cumbersome for the parlor, looking more like an electric furnace than a radio receiving set.

For Peaceful Ventures

Practically Every War Instrument Could Be Put To Better Use

Apparently Sir Hubert Wilkes, having his recent search for the lost Roald Amundsen, was preoccupied part of the time with other thoughts than those of rescue. He has developed his scheme for an undersea carrying trade, conducted by submergence over the roof of the world.

How practicable his scheme is will not be presumed to say, but one thought struck us in this regard. If Sir Hubert's plan ever materializes it will be the first time the submarine has ever been used extensively in a sinister craft, at the present time, essentially an instrument of death. It may yet come to serve the needs of humanity, instead of threatening to wreck civilization.

There is a moral here, which humanly, deplorably, will not heed—that almost every ingredient of destruction has a civilian utility, and that the stupidity of man alone stands in the way of its peaceful employment.—Hamilton Spectator.

Condemned as dangerous, the famous "King's Oak" in Tifford, England, has been reprieved. The great tree, said to be mentioned in Domesday Book, will be made safe by experts.

A Paris telephone exchange has an automatic name that gives out the exact time, current to the smallest fraction of a second, in clear, human tones.

Civilized man has now progressed so far he has little to fear except disease germs and civilized man.

These always, a lie between father and son but the son usually wears it. 2237

HE WAS ALWAYS TIRED AND ILL

Three Complaints Gave Him a Miserable Time

Suffering from three complaints—indigestion, kidney trouble, and rheumatism, how could this man be fit to do his job? He was always tired and ill. This is what he wrote: "Up to a month or so ago, I had suffered continually from indigestion, kidney trouble, and rheumatism, and under medical treatment of various kinds, but without effect until I gave up my work. In four weeks, Kruschen has brought about a complete transformation. I have a healthy appetite, and more energy than I feel that it is good to be alive."—B.V.N.

The kidneys are the filters of the human machine. If they become sluggish, impurities and their way out of the body. In a few days, half-a-dozen common ailments are removed. The scientific combination of salts in Kruschen quickly coaxes the kidneys back to healthy, normal action. Soon your ailments are relieved and life becomes a joy again.

For Emergency Use

Every Home in Britain To Have Its Monthly Food Supply

Every food house in Britain is to have its food dump, consisting of a few hundred tons of food. In an emergency use in the event of another war. Homeholders are to be given the option of purchasing specially-priced parcels of imported food stuffs at prices ranging from 10 to 11p, according to quality.

It will be possible to add to the cheaper parcels until the war dump is sufficient to feed a family of five or more for a maximum of six months.

For those unable to afford cash purchases terms will be arranged by the finance houses. It is estimated that within two years 5,000,000 families will have their food reserves tucked away at home.

An average of £30, according to the experts of the Empire Movement, is expected to be spent by the scheme, will be spent by the 5,000,000 families.

It will pour into English and Empire under the colonial sum of £150,000,000—all "raw money" which should result in a tremendous slump for certain industries. The Empire Movement, probably the most powerful patriotic body in the Empire, has very substantial backing in both Houses of Parliament and a country-wide organization capable of taking the food dump plan into every town and village.

Canada's Position

Should Co-operate With Great Britain And The Empire

Where do we go from here? Some would have us play "Mary, Mary Quite Contrary" and make up at Mother Britannia's mercy to show that Canada is a grown-up, independent girl. Others, with more realism, see that good sense no less than sentiment requires that we co-operate with Great Britain and the Commonwealth.

Add the overwhelming majority of Canadian, French-speaking or English-speaking, desire that co-operation with the free institutions of the Empire. Of course, Canada comes first, but loyalty to Canada should always come a bad last. The same policy for Canada is one of free co-operation with Britain—not just kicking.—Winnipeg Tribune.

REMINISCES OF BRAVE DAYS OF EARLY CANADA

Is Automatically Set

Choose Spray Against Mice To Meet Modern Trap

The modern mouse must be getting to be a pretty sharp fellow—at least, judging by the tricky gadget which invented these days to catch them.

One of the latest is described by Roy C. Burns, managing director of the National Veterinary Congress. "It is irresistible to the first mouse and when he enters he automatically sets it for the second mouse," explained Mr. Burns. The first mouse in front of him a modernized mouse house, sprayed with glass beads, he enters a hallway and looks into a lighted mirror, and he thinks his reflection is another mouse. Losing all caution, he moves into a glassed-in compartment full of mirrors, but he discovers the cheese is in another transparent chamber, and he stops to cogitate. Another mouse outside looks in and sees a dozen mice—a whole convention of mice he comes in, too. Another mouse drops, and so it goes."

ALICE STEVENS' RECIPES

TOUGH CUTS OF MEAT CAN BE MADE TENDER

Tough cuts of meat are avoided by many people because they find the meat is not satisfactory. It lacks flavor and is hard to chew. This is because the meat is not properly cooked. As a matter of fact the tough cuts of meat have a finer flavor than the tender cuts in many cases and there is a greater quantity of nutritive material in the animal determines the toughness of the cuts. Age and exercise help to develop this. Veal is tender than lamb because of the difference in the age of the animal. The tender cuts of meat are found in the young of the animal. These meats are used very little.

As a matter of fact to make them tender is simply a matter of softening the connective tissue. There are four rules for this: Cook the meat slowly for a long time. Put roasts require from 90 to 120 minutes. Stews require from 20 to 30 minutes. Tough cuts are used for the pot roasts and use additional time to help to soften the connective tissue. Grind the meat to help the cooking. Use a little vinegar or lemon juice to help the connective tissue. Meat for hazing should be put through a grinder.

Pound the meat. This makes the connective tissue. Sprinkle the meat with a little flour before pounding. Cook the meat for the most of the time and helps retain the flavor. Cook the meat with an acid. The acid acts on the connective tissue and softens it. For this reason, tomatoes are often cooked with tough cuts of meat.

Try this recipe for apple rings. It makes an attractive garnish and adds to the tastiness of a meat dish. Wash and core apples but do not peel. Cut in half and slice. Heat two cups of water and add salt, water or drippings from a roast of beef or pork. Try the apple rings in this fat. Sprinkle with salt and pepper. Fry the apple rings in the fat. Attempt frying only one layer of rings at a time. Serve with roast pork or steak.

TOWN OF REDCLIFF
The Local Tax Arrears
Consolidation Act

The Council of the Town of Redcliff has passed a By-law declaring that the above Act will be applicable to the Town of Redcliff and a By-law has been approved by the Minister of Municipal Affairs in writing.

All consolidated arrears of taxes shall under this Act be payable by five equal annual instalments together with the current taxes on or before the 15th day of December as per an instalment mentioned.

The following persons may apply to the Council to come under the provisions of the above Act.

Any person, firm or corporation who is the owner of any parcel of land in the Town of Redcliff, against the title of which there is a subsisting mortgage for arrears under "The Tax Recovery Act 1923."

Any person who has been a bona fide resident of the Town of Redcliff for 12 months immediately preceding the date of his application in the case of lands which have been finally appraised by the Town of Redcliff, or, if sold, or such person's personal representative.

In such cases where the applicant's property is to be exposed for sale at the forthcoming Tax Sale on Sept. 15th, 1927, such applicants should make their applications in time for the Council to consider same previous to that date.

Upon receipt of the application, the Secretary Treasurer shall calculate the amount required to pay the arrears of taxes, if the same were consolidated, and the applicant shall deposit with the Secretary Treasurer the amount to pay the current taxes.

In such cases where the applicant to consolidate is made after the 1st day of November, the applicant shall also deposit with the Secretary Treasurer the amount to pay the current taxes.

If any event the current taxes shall be paid by the applicant on or before the 15th day of December.

When the application is granted, the amount shall be applied on the applicant's consolidated arrears, otherwise it shall be repaid to him.

In case the application is not granted, provision is made in said Act for an appeal to the Minister of Municipal Affairs.

No buildings, fences, fixtures or other improvements shall be removed from any land in respect to which there is a subsisting tax consolidation agreement.

To those who property come under the provisions of the above Act, all proceedings under the Tax Recovery Act 1923 are suspended in respect to the properties involved while such consolidation agreement is in force.

The Dominion Government has planned to purchase large quantities of fruit and vegetables for shipping to the south coast of Saskatchewan and Alberta. The purchase is being made through the department of agriculture.

The "Big Interests" in Life Insurance

Are the Policyholders and Beneficiaries

IN Life Insurance, the "Big Interests" are the millions of Canadian policyholders and beneficiaries—men, women and children who share in the protection made possible by individual thrift and foresight.

The concern of those who act on behalf of these policyholders and beneficiaries is to safeguard their interests. Their accumulated savings, amounting to more than two billion dollars, must be invested wisely to obtain the greatest yield consistent with safety. Every promise made in Life Insurance policies must be fulfilled completely and promptly.

Canadian policyholders may feel justly proud of the wise and careful administration of their trust funds. Even in the darkest days of the depression, their companies met every obligation promptly and fully—bringing financial security to thousands of Canadian homes.

There is added satisfaction in the fact that the investment of Life Insurance funds has helped to build Canadian homes, schools and hospitals—and develop agriculture, industries and public utilities. Thus, the whole Dominion benefits from Life Insurance.

In the future, as in the past, Canadian policyholders and beneficiaries must always be the "Big Interests" of Life Insurance.

ALL OUR ADVERTISERS SAY SO

Over \$40,000,000 worth of Western Farm Products poured into the East last year

In steady work, the industrial employes maintain a high standard of living. His appetite for Prairie Province foodstuffs is insatiable. He and his family are one of the reasons why over \$40,000,000.00 worth of Western farm products found a market in the East last year.

Over \$40,000,000.00 is a lot of money! It's a sum that means much to the Western producer, collectively and individually. It went, generously, to every type of farmer.

For instance, those specializing in live stock, took in over \$15,000,000.00 for

127,000 tons of fresh and cured dressed meat, 175,705 head of cattle, 21,144 calves and 41,557 hogs shipped to the East. Nearly 10,000 tons of butter brought in \$4,500,000.00 more, while grain, poultry, eggs, honey and other commodities accounted for an additional aggregate of well over \$20,000,000.00.

That is why a prosperous industrial East means a prosperous agricultural West; for more and busier Eastern workers mean a greater demand on their Western countrymen. Your purchase of a Made-in-Canada car helps towards this end.

These are 12,000 workers in Canada's automobile plants, and 12,000 employed in the 200 parts manufacturing plants. An average of one in a family owns one (1926 car). These workers demand to share in the benefits of the money they produce. They demand to share in the money they produce. They demand to share in the money they produce.

For statistical and further information about this industry, write to Automotive Industries, 100, Lakeside Building, Toronto.

Position Is Unchallenged

London Has Become Centre Of Great World Carpet Trade

London is now in the proud position of being the carpet centre of the world. We captured it from Constantinople, and now we have strengthened our hold that our position is now unchallenged.

The centre of the trade is Collier street, E.1, not far from Liverpool street. Here, in the great warehouses of the Port of London Authority, which at one time were the barracks for the troops of the East India Company—Clive himself was quartered at Collier street—are eighty great rooms set aside for carpets.

They are here for the benefit of brokers of all nationalities, and the incidental enrichment of our own Customs. They come from Afghanistan, India, Persia, China, Baluchistan, Caucasus, and Greece, and are set in the various rooms for inspection.

Deals are made, the carpets are washed by a secret and special process which improves their color, and if for re-export to other countries, are packed into bales. From the moment of their arrival they are stored and sealed by the Customs, excepting the carpets from India, which enjoy a duty-free preference.

To the untutored eye it is a bewildering business. There are, for example, 500 sorts of Persian carpets. I was shown one from Tebriz, a beautiful piece of work, with 600 to 700 stitches to the square inch. In glowing colors it was a hunter after deer, while dragons stalk their prey. A Persian merchant translated a written name in Arabic, showing that the artist who fashioned this carpet copied a design of 1855.

"Such a carpet should never be walked on and probably never be touched," I was told. "It will look at its best hung as a tapestry."

Its basic price, before duty is assessed and before it ever reaches the wholesaler, is 500 per square foot. It will probably have cost the purchaser something like \$500.

First carpets are not dear. Today, prices, I was assured, have been going down for the last four or five years.

The closeness of the stitching by the patient hand men and desert workers counts considerably in the assessment of value and the man who can approach 2,000 stitches to the square inch is regarded as an artist.

These carpets from Persia, India, and the mountain craftsmen of Baluchistan.

Fifty to sixty brokers and merchants are daily in attendance, including Armenians, Greeks, Turks, Persians and occasionally even Chinese, and Afghans, though the trade, in its development, is London market, is now in the hands of Jews. Bargaining is keen, and is conducted over long hours.

The establishment of a bazaar transaction—London Observer.

Creating A Problem

Anti-Noise Campaign In Montreal Upset By Barking Dogs

Montreal's anti-noise campaign has met its "Waterloo"—the barking dog.

Those directing the campaign, initiated by Prof. H. E. Reilly, of McGill University, have the same problem as that experienced by New York City authorities who attempted to stop the course of nature in the control of dogs.

Many letters have been received from complaining citizens demanding action in the elimination of night, or early morning barking. A preliminary survey of the problem reveals a tremendous dog population in Greater Montreal. Most of them are vocal during some time of the day, frequently to the annoyance of neighbors.

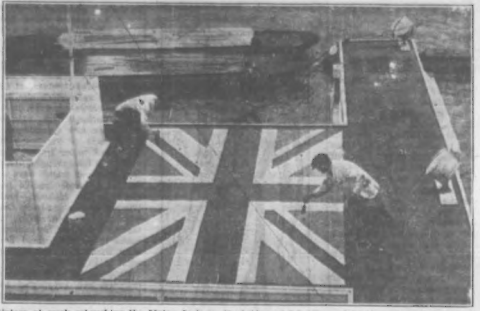

It is not considered as possible to eliminate dog-owners in view of their great number. Severe dog vocal chords, as one man attempted in U.S.A. some months ago, is considered out of the question. The only approach to the problem left, it is now conceded, is to retain Montreal's dog population—Montreal Star.

What Is The Answer

In the R.A.F. an officer's wife is officially known as a "lady," whereas an airman's wife is described as a "wench." If an airman, wrecked up through the ranks to sergeant-pilot and then gets a commission, does his wife automatically become a "lady"?

There are 6,665,600 miles of motorway roads in the world.

SHOWING THE FLAG

Painters at work retouching the Union Jack on the bridge of S.S. "Duranda" here called for India from the Royal Albert Dock. Her route lay through the Mediterranean, sea of recent "pirate" activities.

Has To Be Expert

And Professional Tea Taster Is Also

A tea taster is an extravagant man. He makes several pots of tea at one time, and doesn't drink a drop, although he makes it as well as it is possible to make tea.

Watch one at work in a tea merchant's office in the City of London. Round the walls stand great chests of tea, stamped with the colorful names of the estates in India, Ceylon, and China from which they come. Seven different teas to be tasted are neatly placed in seven small bowls, with a teapot and cup by each heap. A taster's teapot is about the size of a breakfast cup, and instead of having a spout, it has a lip like a milk jug.

The taster begins his preparations. On a small balance he weighs a much of each tea as he equals the weight of a six-pence. A kettle is brought in, and he directly it boils he picks it up and fills the pot to the brim, replacing the lid as he goes along. Then he starts an alarm clock that runs for six minutes.

Immediately the alarm rings the taster pours the "liquor" from each pot into its respective cup. The tasting is now beginning in earnest, all the while the liquor is still hot but to sip. Meanwhile, the taster takes a sample of each of the wet tea in his hands, sniffing and grazing them and noting the color. The appearance of the wet leaf is important as it is a rough rule that the lighter the leaf the better the tea.

When steam ceases to rise from the cups they are ready to taste. Tea tasting is no drinking-room affair. You do not tilt the cup to the lip, as you do in drinking, but suck it noisily in the manner of the soup drinker who has little regard for the conventions. Nor is it a sign for having rolled the tea in the tongue, you spit it out—From Overseas Daily Mail.

Perfect Telephone Bell

Is Of Olden Pitch And Does Not

Far On Nerves

The alarm clock's raucous note may be put by the discovery of British post office engineers of a "perfect telephone bell."

The bell, approved by a specially engaged jury of musicians, will be incorporated in the 1934 telephone. The chosen is said to be of medium pitch, but average volume. It can be heard well, but will never give anyone a fright when it rings.

Other features of next year's telephone will include what is considered a greater aesthetic appeal. The shape of the stand has been altered so there will be a more imposing front, although it will be more compact; a smaller pad pulls out and provides a pad for notes and new rubber feet of the non-slip type to prevent slipping on polished tables.

Headlight Menace

Hindling Glass Is the Cause Of Many Accidents

The question of dimming automobile headlights is to be taken up at the next session of the Ontario Legislature. But, instead of its being a problem for that body, we suggest that it is a question which should receive the urgent attention of the automotive manufacturers.

In spite of the progress that has been made in the development of safer, faster and smoother cars, little has been done about headlights. They were sometimes a problem in the old days when a tank like a fire-engine was carried on the running board to generate gas for the lights. On occasions one lamp would be out of focus, or it would be dark.

Nowadays so many headlights are fitted so that one light shines into the air and the other right into the eyes of an approaching driver. Sometimes one light is partially dim and the other too bright. And there are any number of combinations that make it difficult for the motorist meeting the car with the faulty lamp. There is a wide field of adventure open for any automotive engineer who wants to get busy and develop a headlight that will illuminate the highway and at the same time not throw a blinding glare.

Windsor Star.

Greed Or Courage?

Hard To Know Which Takes Hold In Life Trap

W. Beach Thomas contributed this story to the London Spectator: In a certain vegetable garden, much beset by sparrows, a wire sparrow trap has been kept continuously baited. It catches almost daily not only sparrows but one particular robin. The robin, a bird apparently to have been quite well used to temporary capture, is taken very happily, and shows no alarm, just waits happily for the hour of its release. It is difficult to believe that the bird does not know that there is no escape from the cage; but it is open to argument whether its daily visit is due to greater proportion to greed or courage.

Endrome In Nose

The Malay Peninsula has many extremes in size among its animal life: insects range from 15 inches in length to others so small that they cannot be seen by the naked eye, and animals range from the elephant to the smallest known animal, a tiny variety of bat.

Perhaps the reported annual sale of 100,000 crocodiles is more amazing than the fact that they are real. No evidence that they are real.

Portable school buildings of light steel are being used in districts in England subject to unexpected rises and falls in population.

TO CARRY PASSENGERS, MAIL, AND EXPRESS ACROSS CANADA

One of the ten-passenger Lockheed-12 Electra planes with a cruising speed of 180 miles per hour, now testing out in Western Canada. Equipped with twin engines, this machine has sufficient power to fly over the Rockies with only one engine working, should an emergency arise.

Freedom Of Open Spaces

Asked By Britons Who Are Fond Of Walking

The cry of the ramblers is echoing over the mountains and moorlands of Britain. And its heart also thunders over the meadows and fields along her lanes and footpaths. The ramblers' cry is a strange bird. It is the cry of the English equivalent of the American "hike."

Their cry is "let us wander where we wish," for few of them are hitch-hikers or even road-ramblers. They prefer the trails and paths that criss-cross the countryside. And they dislike barbed wire fences and "no trespassing" signs.

As Arthur Greenwood, former Labor minister of health, puts it: "It is the inherent right of every British citizen, provided he fulfills his responsibilities, to wander down mountain, glades and dells, and to spend his days on the sabbath, irrespective of who happens to be the owner."

Difficulties of the ramblers was the subject of a conference called by the Commons, Open Spaces and Footpaths Preservation Society to consider means of access to the countryside and preservation of rights of way. His name alone should command attention.

The ramblers' cry has penetrated even within the walls of Westminster. Geoffrey Mander, Liberal M.P. introduced in the House of Commons last July a measure called the Access to Mountains Bill. But it had yet to become law.

The Ramblers' Association strongly supports the bill. "We are the only civilized nation which denies its inhabitants legal access to hills, moors and open spaces," it concluded in a special statement. "We are the only nation without national parks."

In Britain, where thousands of acres of lands are privately-owned, rights of way and public footpaths assume importance. To country dwellers they are usually time-consuming short cuts. To the innumerable hikers who cover the land in the summer months they afford access from the mechanized traffic of busy roads and provide routes to unfrequented beauty spots.

His Life Work Chosen

Dole Leaving An Undeniable Impression On The Rising Generation

"While the role is an absolute necessity in many cases where victims of circumstance no longer find it possible to support themselves and their dependents, it is leaving an undeniable impression on the rising generation that will have to be counteracted in some way."

The thought is prompted by a comment passed by a pupil at testing one of Windsor's elementary schools. Writing under the caption "What I Would Be," this young lad expressed no ambition to get into debt and his own row, nor is he interested in studies. His figure illustrates it of no use because doctors, lawyers and school teachers have to pay so much for clothing and food while the person on relief get all the bread and milk they can use and their gas and light bills are paid by the city. So he would rather be on relief.

This is an attitude which hitherto had been quite foreign to rising generations of Canadians. It is one of the after-effects of widespread relief. It is impossible to say how prevalent it is, but it has become sufficiently rooted to cause some concern—Kitchener Record.

It is harder to arouse a slumbering person with notes about an hour after he's gone to sleep than at any other time.

The first package of merchandise ever carried across the Atlantic by airship was a consignment of toys aboard the ZR-3.

The Heratitan city of Belem, on the equator, prepares for rain virtually every afternoon at 4 o'clock—and gets it.

Crime Detection

Science Bridges Invaluable Aid To Officers Of The Law

Science is working hand in hand with the police in tracking down the criminal. The latest developments in police detection at Montreal heard from Deputy Chief Inspector John J. O'Connell in the New York Times.

How the microscopes and the chemical formulae side crime detection was the subject of a lecture from two criminologists by the American police executive, He recounted, chiefly, the work of New York's "technical research laboratory" in the police department.

The laboratory, he declared, constituted "a part of police science which is of unmistakable value in the work of criminal identification and apprehension." For it was "most essential" that police use "every means that can be borrowed from science . . . to supplement the efficient services of trained and capable investigators."

Charred bits of paper become identified as forged bonds in one case the expert detailed, and the microscope and the camera sent a man to jail for five years. A Montreal station on an automobile license plate convicted a hit-and-run motorist. Silver refractive laboratory "in the police department" and convicted a \$10,000 gold gang.

Only Small Area Cultivated

Japanese Farm About Sixteen Per Cent Of The Land

From the point of view of climate, geographic, and soil conditions, Japan may be said to be one of the poorer agricultural countries. At the same time, although the Japanese farmer stagnates under heavy debt and constant taxation, agriculture has been and is the backbone of economic life in Japan, a fact often overlooked by the West. Great Britain cultivates 25 per cent; Germany 44; France 39, and Italy 41 per cent of the total land area. Even in the United States, although a considerable area of arable land has not yet been put to use, 18 per cent of the total area is under cultivation.

The Thrill Of Playing

Is Only Equalled By Watching

"What was the attraction?" is probably the first question many persons asked on reading the news dispatches regarding the attendance of 20,000 people on the second day and 45,000 on the third day of the International Flamingo Match at Fergus, Ont.

Perhaps being a town with no great population, the attendance of 20,000 people at a large percentage of the people came from outside points. It would be further assumed that only a very small percentage of the 45,000 people actually took part in the contest.

The answer, of course, would be obvious to anybody who knows anything about playing. There is nothing like the thrill which accompanies playing a straight flush, and when you can't do the playing yourself you watch the best thing is to watch—Windsor Star.

War Against Insects

Is Very Materially Assisted By

Use Of Birds

Canada spends considerable money each year on various methods of controlling the insect pests which attack farm crops, native forage plants and forests. The destruction of a large scale, of plant life by insects is perhaps more noticeable in the semi-arid regions of the west than elsewhere. Periodically in these regions various species of grasshoppers and crickets reach plague proportions and devastate vast areas. Efforts to control these insect plagues are very materially assisted by the work of birds. Where such conditions prevail many species of birds feed exclusively upon these destructive insects which can be secured with practically no effort. This food supply is then so abundant that many more young birds reach maturity than is the case when the food supply is relatively scarce.

"We had to let our maid go!"

"Why?"

"We lived in a trailer and she inevitably put the wrong oil in the tank."

The man who regards most change as chicken feed never acquires a nest egg.

THE ROLL OF A NATION

Ogden's Fine Cut has the taste that appeals to Canada's roll-up people from coast to coast. It's the only one that makes each puff a genuine pleasure. With a picture of Ogden's and "Cigarette" or "Vapor" paper you'll quickly see why this mild, cool, fine cut is the "roll" of the nation. The new way is bigger packages of Ogden's.

WORLD HAPPENINGS BRIEFLY TOLD

A petition signed by 3,841 Australian aborigines, asking they be represented in parliament and state to be taken to prevent the race from dying, was forwarded to the King by Prime Minister Joseph Lyons.

A new method of treating diabetes with insulin evolved in small tablets instead of by injections with hyperemic needs, was forecast before the National Academy of Sciences, Rochester, N.Y.

The air correspondent of the London Daily Herald (Labor) stated Great Britain now was capable of building aircraft more swiftly and in greater numbers than any other European country, including Germany.

A pen of 10 Rhode Island Red hens owned by C. J. Henrich of Waterloo, Ont., won the 10th Canadian egg laying contest, producing 5,680 eggs in 365 days and compiling a total of 219,510 points.

The wedding of King Farouk of Egypt, youngest reigning Moslem, and the 17-year-old daughter of an Egyptian high court judge, was officially set for next January 6. The king is 18.

Ten blue dolphins discovered in Kimberley, South Africa, two years ago now are being mined. Thirty Europeans and 400 natives are operating a plant built at a cost of \$875,000.

Four radio engineers broadcast voice signals directly from submerged submarines for the first time. The signals, sent from the submarine B-14, off Bartlett reef light, were picked up 10 miles away at New London, Conn., the navy's submarine base.

The department of agriculture reports receiving ailments that heavier and better finished cattle are in demand by United Kingdom feeders as a result of the fat cattle bonus scheme which became effective in Great Britain in August.

The department of trade and commerce reports it had received a communication that the fur exhibit at the Canadian Pavilion at the Paris exposition had been awarded the "Grand Prix d'Honneur," highest prize which can be bestowed on an exhibit.

Protest Advisable At Times

Optimum Without Action Will Never Put Things Right

It isn't always advisable to be satisfied with things as they are, says George Ade, in *Horatian Magazine*. It is all right to advocate optimism and smiling faces and sunny dispositions for the future, but sometimes it's a good idea to be a growler and register an occasional howl. In other words, don't accept halfway results and compromises as an easy way to solve problems. Be the devil's advocate and try to find out what is wrong with your surrounding conditions instead of taking it for granted that everything is "O.K."

Chris Lovanovsky, nephew of Sigismund Lovanovsky, Russian Minister to the Arctic, is a student at the Technical University in Belgrade, earning his keep by delivering milk.

Women, says a librarian, read more than men. That may or may not be so, but they undoubtedly have a greater gift for reading between the lines.

The Society Of Friends

Many Quakers Are Prominent In Well Known Industries

"No one can know Christ without seeking and trembling." This remark, made some 300 years ago by a man named George Fox, establishing a new religious body—the Quakers.

Known in England as the Society of Friends, the Quakers have done much to promote peace and alleviate the evils of war. What is not generally known is the number of prominent industrialists who are also Quakers.

Barclays and Lloyds Bank were first founded by members of the Society of Friends. They established such trade names as Colman's Mustard, Huntley & Palmers Biscuits, and Jacobs' Biscuits. Three Quaker families, the Cadburys, Fry and Rowntrees, made fortunes in the chocolate business.

Britain can claim at least 30,000 Quakers. In the worldwide group, the Society of Friends has 600,000 members. Twice only, in the 300 years of its existence, this deeply religious sect has held a world conference. The first was held in London in 1695; the second in Philadelphia in 1827.

Among the delegates to this world conference was Mr. Harold Cadbury, a bearded little man, who was chairman of the great chocolate firm until five years ago. His wife, Gertrude, is a Dame of the British Empire, but like most Quakers does not set store on titles.

"I put 'Q' on my visiting cards," she admits, "but I wouldn't like to be called Dame."

Emergence of Fry of the Bristol chocolate-making family, was also present. The one notable absentee from this great religious gathering was H. Bismarck, head of his family and business, who at the last moment was prevented from attending as he had planned—*Pearson's Weekly*.

Display Of Photographs

International Salon Of Photographic Art Held At Ottawa

Seventy thousand persons crowded the National gallery at Ottawa and viewed the 181 prints in the Canadian Salon of Photography. The photographic art which will tour the country this winter. Briefly appured by the National gallery of photography is a hobby, the procession through the gallery lasted all afternoon till closed.

In their foreword to the catalogue the gallery's officials said: "The general impression is that the pictures in the album held by the National gallery and circulated throughout Canada during the past three years, prove how much progress is being made in photography along sound artistic lines and this salon seems to express the continuity of this growth."

In this show, 28 Canadians have had prime places in the exhibition. Trend of photographic art toward rhythm, pattern and sharp detail is pronounced in this exhibition.

There are few landscapes, and water pictures are confined chiefly to slow moving patterns of light on waves. Many entries tell stories, many are designed to show features of their subjects, texture of velvet, damask, hand, human skin, hair, ice, snow. There are only a few portraits, most of them striking.

Report Radium Film

Discovery Made In Hill On Which Part Of Fort Arthur Is Built

Domestic geologists, Dr. T. L. Tait and Dr. E. Milne, report having found radium in the rock formation comprising the hill on which part of Fort Arthur is built. The radium was contained in ash from the mineral called anthracite, which is practically all carbon and the anthracite in appearance.

The geological survey at Ottawa has commissioned a local mining engineer to gather samples so that further examination may be made with a view to determining whether the radium is available in commercial quantities. Some sections of the hills where the host rock is located are covered with houses and residences.

Advances New Idea

If your physician says "almsy" at you, don't feel bad, money; they're doing it because they're really the doctors. This kind word came from Dr. Nita Miel, chairman of the Quaker Association of Individual Psychology. Little boys who yell "almsy" generally do so to hide their conviction that they aren't equal to the one who is desired, she said.

The haremness is the state of fear of Minors.

Mineral production in Turkey is rapidly increasing.

Sanctuary For Boys

Children Pay A Visit To Jack Miner At Kingsville

The press of many countries has told the world of what Jack Miner has accomplished at his home in Kingsville, Ontario—of how he became the pioneer builder of bird sanctuaries, the pioneer in handling Jack Miner who, with little money and no natural advantages but with a profound understanding of the needs and nature of the birds he sought to attract made his home the host loved to his feathered friends. In America today there are thousands of birds, from martins to the majestic geese, who know and recognize the voice and personality of Jack Miner as a friend; but it is just as true that there are many thousands of people who look back to the days they spent in play in the sanctuary for boys that Jack Miner built many years ago in his beautiful home. It is in this side of Jack Miner's life that is not so generally known, the boy who said that his love for birds and all Nature is only exceeded by his love for boys. Not only has Jack Miner developed his bird sanctuary, but he has called the most beautiful bird and play ground in America for the youth of his own community but he has influenced dozens of service clubs and other organizations throughout these two countries to follow the way he has pointed.

I recently motored several hundred miles to be present at a very special event at the Jack Miner Sanctuary—the annual picnic for the underprivileged children of the country, together with their mothers. This memorable event in the lives of scores of kids is sponsored by the Lions Club of the town of Kingsville in co-operation with Jack Miner. And what a day it was!

As I stood chatting with one of the business men of the town we studied the faces of those kiddies who were lined up before us, awaiting their turn for a helping of ice cream or other of the many treats. Here were scores of boys and girls—future citizens of Canada: What were they to become? This question can be partly answered when we think that in 20 years thousands of children have played in this Jack Miner Park and in all that time not one of them has ever been spoken to for misconduct. These children love Jack Miner for what he is and, for his generosity, his simple straight-forwardness, but perhaps above all for his genuine love and understanding of them. These children are different from those we see in so many towns and cities. They respect the love and kindness shown them.

Late in the afternoon we suspended play in the park to feed the birds. We gathered near the margin of the pond and at the sound of Jack Miner's voice dozens of beautiful pure white doves came from every side to alight on their hands. A bit of grain in his ear or on his shoulder were thrilled by the confidence of these beautiful birds that came without hesitation and ate the grain we placed there, while all around us were the waterfowl who were just as eagerly fed by their host.

Condensed from an article by John W. Piggott, in October issue of *Forest and Outdoors*.

A writer declares that very few "dovey" girls marry. You cannot get husbands by degrees.

GAY SHIRTSWAIST FRICK PROVES A BOON FOR BEGINNERS

By Anne Adams

Some fashions are good for a season, some for a year, but the shirtwaist is a good forever! Here Anne Adams invents, gives a version of your favorite classic, and just the frick you need for campus, office or round-the-town. Beginners and Pattern 4585 "a map" to make, and the simplicity of the skirt with its action-loving pleats. You get a maximum of smart results with a minimum of effort in the jaunty collar, bodice panels and duster of sleeve length. Sheer would be warm and bright, and you may contrast the collar and cuffs for dash. Pattern 4585 is available in misses and women's sizes 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40 and 42. Size 16 takes 2 1/2 yards 44 inch fabric. Illustrated step-by-step sewing instructions in full.

Send twenty cents (20c) in plain stamps (cash preferred) for this Anne Adams pattern. Write plainly, Name, Address and Style Number and send order to the Anne Adams Pattern Dept., Winnipeg, Manitoba, Canada, R1S 1G6, 115 McDermott Ave. E., Winnipeg.

Education Over The Air

Public: Just Now Seems To Prefer Light Entertainment

The radio public's taste has been shifting from serious to light stuff; or at least it did so change between 1927 and a couple of years ago. This is reported by Frank Ernest Hill in his latest book, "A study of education over the air published by the American Association for Adult Education. In a survey of radio entertainment accounted for 45 per cent of all broadcasts; serious entertainment, including educational programs, 30 per cent; and special features, five per cent.

By 1931 light entertainment had gone up to 55 per cent and serious entertainment had dropped to 25 per cent. By 1933 the light matter stood at 60 per cent, the serious 25 per cent, the special features 15 per cent. Since 1933 Mr. Hill thinks education have won back some of the lost ground.—*New York Times*.

CHINA'S DICTATOR WITH WIFE

This excellent new photograph of Chiang Kai-shek, China's Dictator, and his wife, was taken at Nanking during a press conference at which Kai-shek gave his views on the Sino-Japanese situation to newsmen.

Chief Of All Antiques

Is Central Chimney Used By New Englanders Years Ago

An antique that never appears at auctions, yet certainly has its place in all in size, weight and general importance, not to say charm and sentimental value, is the old central chimney, often twelve feet square at the base, upon which our New England ancestors depended for life. All other antiques are afterthoughts, auxiliaries and appendages to this great heart of the house, with its major and minor cranes, eels, rails, ovens and handwrought iron girders. New England might have survived without a single trundle back combler's bench, highback, lowboy or Windsor or banister-back chair, but without this fortress-like masonry that split the roofline squarely in its center it certainly would have perished, hardly as it was, some January night at 20 below.

Non-antiquarians who have such a chimney, well supplied by base-burners, vacuum-vapor heat, systems or air-conditioning, nevertheless feel the strength and prestige of the old central chimney. They often turn off the radiators in the keeping room in a December night and throw a cord of wood, more or less, into the old fire-foot hearth. Smoke escaping turns into ghosts of those who used it, and other warmth no means of cooking a square meal than this chimney provided for a hundred years, and romantic imagination in its fire-light begins to entertain the old fantasy—that life was somehow warmer and brighter in other times.—*New York Herald-Tribune*.

Waiting Fruit

Waiting The Greatest Good To The Greatest Number

The high price of fruit is always rather a sore point with me. I don't mind paying, I respect fruit, but a good, fat price, especially early or extra late, but I do kick on the price of a crowd of people who can't, on the incomes they get, enjoy fruit in season in any quantity. It was some hundred thousand boxes of Western apples were left in the Okanagan unsold as they weren't moved before the market crashed. If correct, it's nothing short of a crime, when one knows of so many people who have to buy apples twice at a time.

It wouldn't take much effort to sell a surplus like that in second-hand apples boxes, old orange or egg crates—anything at all that would hold apples—at a cent or two per pound. It is to take off my mind the kind of market control any day, for I would be truly to the greatest good of the greatest number. I am positively convinced that there is a market, almost untouched, right at home, for lower grade fruit, and for the fruit for consumption—Kamloops, British.

Linen Gives Long Wear

Oldest Known Textile On Earth Is Very Durable

Contrary to general opinion, lightweight clothing is not always considered the most durable. The *Illustrated London News* says that in the Egyptian mummy of a Pharaoh, the linen which is an excellent conductor of body heat. In the tropics heavy linen is worn, for it is coolest. Since linen is also very absorbent, heavier linen more quickly takes up perspiration than does light. Linen is the oldest known textile on earth and is very durable. The "winding sheet" of King Tutankhamen's tomb was in good condition after having been in the vault 3,000 years.

The Best Is Yet To Be!

Holding To Faith In The Future Of Canada

It is better to look forward than backward. Canadians especially need not fear the future. The depression is disappearing, so that there should be opportunity for all who are willing to put their weight in the scale. The world—indeed, the world—will be what humanity makes it. These who look for trouble always find it. Those who see the best in the ways of peace and industry and who live sensibly will find in this country opportunity for a great deal of comfort. The old days probably were all right in their way; but the best is yet to come. "Eyes Front!"

Making Use Of Mud

At last a use for mud dredged from the bottom of Lake Ontario has been found. The Government of Georgetown has decided to use the mud to build up the level of Georgetown, which is below sea-level. The grey mud, it was found by experiments in England, was comparable also in the making of paving and building bricks.

LEAGUE OF CANADA presents **TOPICS OF VITAL INTEREST** by **DR. J. W. S. MCULLOUGH**

ARTICLE No. 16

"Quack Remedies"

There is a legion of "cancer cures." Some are put forward by unscrupulous persons greedy for money. Others are exploited by the ignorant who have been led to believe that they have a cure. A cure for cancer may vary from the harmless least kind, such as sorrel or violet leaves or molasses and a host of others, to the most injurious made of tartaric emetic, arsenic and sulphate of zinc. Some are taken by the patient right and others are not. They appear as fluids, pills, ointments, pastes, plasters and special appliances.

Qualified medical men have been known to exploit this and that serum or other type of cure. So-called electrical appliances are included in the armament of the cancer-cures. Faith healing, Christian Science, special diets, compression of masses, and others have been known to all promised a cure. When the writer was in charge of the Ontario Royal Commission on Cancer, he had hundreds of these "cures" brought to him, and he was asked to make a book for money. In no case was he or she willing to disclose the secret or order that the cure might scientifically be tested.

The best that can be said of some of these measures is that they do no harm. The patient beyond the railing of false hopes and the delaying of rational treatment. Of others it must be said that they cause much pain and discomfort and hasten the inevitable end. Of all of these quick remedies it is true that they are a waste of money and of precious time. A few weeks delay in the use of quick remedy may suffice to convert a curable cancer into one for which nothing can be done because it has come to the doctor too late.

It is not the ignorant alone who pursue the will-o'-the-wisp of the "cure." Its adherents are seen not only among the uneducated and unintelligent, but among the well-educated and highly intelligent. They are interested in the problem of cancer. It is: "Right Cancer With Knowledge." The more the patient knows about cancer the sooner will fear of the malady disappear. There was scarcely a dent in the ignorance alone who until, about 30 years ago, Anti-tuberculosis Societies began the education of the public in the control of the White Plague.

Knowledge of the magnificent results gained by the use of the treatment of cancer by means of surgery and irradiation will give the cancer victim courage in the fight against this deadly foe. The cancer patient has nothing to gain by recourse to cancer cures. On the contrary he has much to lose by the waste of time involved in the trial of such remedies.

Next article: "Cancerophobia."

Enemy Planes

United States Is Warned Of Danger From The Skies

A warning that the United States may be the target of a surprise attack from the air within five years came from Major General Frank M. Andrews, head of the United States military air force, who visualized war planes with such tremendous range and carrying capacity as to make them effective weapons against the United States.

"Air attacks cannot be stopped by any means that we have at present," he wrote, adding: "Bombing attacks are the chief means of modern warfare. The air force is the most important of the enemy planes, either airborne, or on aircraft carriers."

Dr. Silvio, the Italian expert, has stated over 4,000 motorized and discovered that these aged 23 have the best reflexes in the world.

House firms thrive better in partial shade.

A. S. Peterson Sec

Three returned soldiers of this district are the only ones which have received the Monsi Wit 14 year star. These are Wm. Hill, of Redcliff, and E. Keal and A. Middleton of Medicine Hat. Mr. Hill was in the R. I. R. Imperial Reserves and served 18 years in the Imperial Army. The two Medicine Hat soldiers were the first to leave this district for the front.
